

SECRET

WHAT IS CLAIMED IS:

1. A control apparatus using the mobile communication terminal comprising:
 - a play portion enabling a play according to personal information;
 - an input portion for inputting personal information from a mobile communication terminal; and
 - a control portion which makes a call to an accounting center based on the input of personal information by said mobile communication terminal and enables the play by said play portion based on said call, wherein said accounting center bills corresponding to said play.
2. A control apparatus comprising:
 - a play portion which stores play information and enables a play according to personal information;
 - an input portion for inputting personal information from a mobile communication terminal; and
 - a control portion which makes a call to an information service center based on the input of personal information through said mobile communication terminal and enables the play by said play portion based on said call, wherein said information service center bills corresponding to said play.
3. A control apparatus using the mobile communication terminal according to claim 2, wherein said information service center stores newly published play information and dispatches said newly published information corresponding to said call; and
 - said control portion receives said newly published information and outputs the newly published information prior to said play.

Patent Office

4. A control apparatus using the mobile communication terminal comprising:

an amusement place allowing an entry according to personal information;

an input portion for inputting personal information from a mobile communication terminal; and

a control portion which makes a call to an information service center based on the input of personal information through said mobile communication terminal and allows an entry into said amusement place based on said call, wherein said information service center bills corresponding to said entry.

5. A control apparatus using the mobile communication terminal comprising:

a release portion capable of releasing charged play pieces based on personal information;

an input portion for inputting personal information from a mobile communication terminal; and

a control portion which makes a call to an information service center based on the input of personal information through said mobile communication terminal and allows said release by said release portion based on said call, wherein said information service center bills corresponding to said release.

6. A control apparatus using the mobile communication terminal according to claim 2 further comprising:

an identification number input portion for inputting an identification number as personal information, wherein said control portion makes a call to the information service center if said inputted identification number coincides with personal information.

7. A control apparatus using the mobile communication terminal according to claim 3 further comprising:

an identification number input portion for inputting an identification number as personal information, wherein said control portion makes a call to the information service center if said inputted identification number coincides with personal information.

8. A control apparatus using the mobile communication terminal according to claim 4 further comprising:

an identification number input portion for inputting an identification number as personal information, wherein said control portion makes a call to the information service center if said inputted identification number coincides with personal information.

9. A control apparatus using the mobile communication terminal according to claim 5 further comprising:

an identification number input portion for inputting an identification number as personal information, wherein said control portion makes a call to the information service center if said inputted identification number coincides with personal information.

10. A control method using the mobile communication terminal comprising:

a play portion which stores play information and enables a play according to personal information;

an input portion for inputting personal information from a mobile communication terminal; and

a control portion which makes a call to an information service center based on the input of personal information through said mobile communication terminal and enables the play by said play portion based on said call, wherein said information service center bills corresponding to said play.

SECRET

11. A control apparatus using the mobile communication terminal comprising:

a play portion enabling a play according to personal information;

an input portion for inputting personal information from a mobile communication terminal which can be connected to the Internet; and

a control portion which makes a call to an Internet service provider based on an input of personal information through said mobile communication terminal and allows a play by said play portion based on said call, wherein said Internet service provider bills corresponding to said play.

12. A control apparatus using the mobile communication terminal further comprising:

an information terminal unit which makes a call to an Internet service provider based on an input of personal information from the mobile communication terminal and enables operation of an Internet information based on said call, wherein said Internet service provider bills corresponding to said operation.

13. A control apparatus using the mobile communication terminal according to claim 1 wherein said mobile communication terminal makes said input by radio.

14. A control apparatus using the mobile communication terminal according to claim 2 wherein said mobile communication terminal makes said input by radio.

15. A control apparatus using the mobile communication terminal according to claim 3 wherein said mobile communication terminal makes said input by radio.

16. A control apparatus using the mobile communication terminal according to claim 4 wherein said mobile communication

terminal makes said input by radio.

17. A control apparatus using the mobile communication terminal according to claim 5 wherein said mobile communication terminal makes said input by radio.

18. A control apparatus using the mobile communication terminal according to claim 11 wherein said mobile communication terminal makes said input by radio.

19. A control apparatus using the mobile communication terminal according to claim 12 wherein said mobile communication terminal makes said input by radio.
